

FOTILE

- 1** The **Wider Chamber Entrance** ensures that every corner of the hood is evenly effective in locking down airborne grease and leading it away.
- 2** The **Optimal Airborne Grease Control Zone** is located 580mm above the hob. This is where the hood can lock down airborne grease completely before it starts to spread.
- 3** The **110-Degree Buffer Plate** is positioned at a 110-degree angle from the chamber entrance to lock down airborne grease and prevent it from spreading.
- 4** The **Automatic Airborne Grease Extraction System** leads airborne grease from the chamber entrance to the exhaust in one straight line with zero to minimal obstruction.
- 5** The **Automatic Turbo System** increases the hood's fan power when it detects that the exhaust is low in pressure to lead airborne grease out of the kitchen smoothly.

Booth : 2101 – 2102

FOTILE·V

As Smart As A GPS.

LOCKS down airborne grease and **LEADS** it out of your kitchen and home.

With Fotile·V, your days of worrying about airborne grease spreading throughout your entire house are over. Developed to be a GPS for airborne grease, Fotile·V is designed to lock down airborne grease that emanates from your pan and then lead the grease out of your kitchen and your home efficiently.

Enjoy preparing meals for your loved ones in a clean and grease-free kitchen today, only with Fotile·V!
